

2D Design *becomes* 3D

FOAM CORE SCULPTURE PROJECT

Using your two-dimensional cut paper value design as inspiration, transform your design into a three-dimensional sculpture that still exemplifies your chosen design principle.

Your sculpture will re-interpret your design principle, using forms based on the qualities of your two-dimensional design.

Start by sketching your 2D design, then 'pull out' shapes and practice drawing these shapes threedimensionally.

- The foam core is all white. Black foam core will be used for background/presentation.
- Consider how your final sculpture will be displayed: hanging on the wall, suspended from the ceiling, sitting on a podium?
- The materials you will be using include foam core, x-Acto knives, and hot glue guns.
- Practice cutting the foam core using the techniques demonstrated. Rough cuts are *unacceptable!*
